Keyboard access to the ribbon

If you're new to the ribbon, the information in this section can help you understand the ribbon's keyboard shortcut model. The ribbon comes with new shortcuts, called **Key Tips**. To make the Key Tips appear, press Alt.

To display a tab on the ribbon, press the key for the tab—for example, press the letter N for the **Insert** tab or M for the **Formulas** tab. This makes all the Key Tip badges for that tab's buttons appear. Then, press the key for the button you want.

Will my old shortcuts still work?

Keyboard shortcuts that begin with Ctrl will still work in Microsoft Excel 2013. For example, Ctrl+C still copies to the clipboard, and Ctrl+V still pastes from the clipboard.

Most of the old Alt+ menu shortcuts still work, too. However, you need to know the full shortcut from memory — there are no screen reminders of what letters to press. For example, try pressing Alt, and then press one of the old menu keys E (Edit), V (View), I (Insert), and so on. A box pops up saying you're using an access key from an earlier version of Microsoft Office. If you know the entire key sequence, go ahead and initiate the command. If you don't know the sequence, press Esc and use Key Tip badges instead.
